

ProjectReady™ Use Case for Leading Facilities Management Organization

Needs

A leading Facilities Management & Private Utility organization needed to manage a major capital works project with a particular need for Transmittal management. Running numerous disparate systems to manage projects, the goal was to find a solution that would allow them to leverage what they own with SharePoint, making it the standard for collaboration and document control for future projects.

Solution

Using the ProjectReady™ Central Software, the organization was able to easily manage Transmittals and drive adoption of the solution. Additionally, they were able to leverage SharePoint, which they already owned, and begin to move to the Microsoft cloud and Office 365. This has helped drive down costs and the learning curve of the new solution.

Competitive Differentiation: *AssaiDCMS*

- Lower Cost
- Lower IT administrative costs
- “Self-Service” empowerment of business users
- Leveraged existing Microsoft Office 365 investment
- Low barrier to entry & exit

About ProjectReady™ Central

In the age of the cloud and digital disruption, the information and documents you need to manage are increasingly all over the Enterprise – driving content chaos. But, the way you need to manage projects, collaborate and control the movement and approval of documents should always be the same, repeatable process.

ProjectReady Central is designed to end the chaos by providing a modern, process driven solution to manage project information, across the enterprise, the same way every time.
