

Simplify, Unify & Collaborate Across Projects

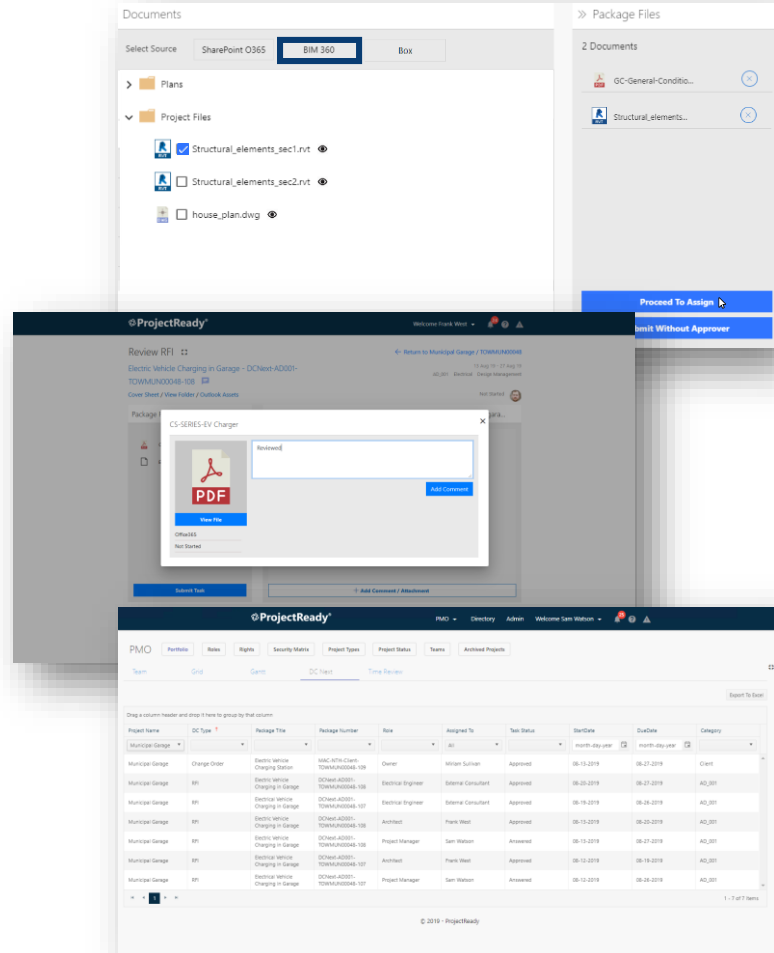

Modern, End-to-End Solution for Project Management & Document Control in the AEC, Manufacturing & Professional Services Industries

Top 5 Pain Points of Document Control

1. Creating document packages are a nightmare due to lack of standard repositories and version control
2. Content review and approval processes are manual and disjointed increasing delays and risk
3. Lack of tracking and auditability for compliance
4. Communication and collaboration is challenging and email makes it worse
5. Visibility of project status and resources availability across multiple projects is challenging

Why ProjectReady

- End, endless searching for content
- Package content across systems, in a single view
- Flexible workflows – repeatable standards
- Automated logs, auditing & reporting
- Automated security & governance
- Simple to use, learn and adopt
- Transform SharePoint & Teams to drive value

ProjectReady

With all systems brought together by ProjectReady, submittal, RFI and other document control processes are all in context of the project. This context helps eliminate the 35% of time wasted looking for the right content, dramatically reduces the risks of missed deadlines, and drives accurate tracking and reporting.

Project content needs to also control email. The few solutions out there let you dump email into a project, ProjectReady makes email a part of the standard workflow & control of RFI's, CO management & logging email content as task to be reviewed.

ProjectReady, drives process, and security, across systems – Microsoft Teams, SharePoint, BIM 360, Box – automatically tracking & controlling the submittal & document control process all in one place, all in the context of the project.

Simple to Use, with Automated Transmittal Logs & Real-Time Visibility, DCNext, is the Next Step in the Evolution of Document Control
