ProjectReady®

COLLABORATION THROUGH INTEGRATION

WWW.PROJECT-READY.COM

WHO WE ARE

ProjectReady facilitates collaboration through the integration of a project's systems, actors, and phases. The solution deploys automation, workflows, a powerful process layer, and an intuitive user interface to drive a modern collaborative project information management (CPIM) experience.

WHAT WE DO

- Provision Procore and M365 and connect systems in just a few clicks.
- Provide all stakeholders with single source of truth to aid in the reduction of delays, rework, and litigation.
- Bring a project's systems, actors and phases together in the context of a project to improve collaboration, accountability, and efficiency.
- Connect workflows and sync content across Procore, ACC and SharePoint.
- Govern secure collaboration across systems, platforms, stakeholders, and phases.

CHALLENGES WE SOLVE WITH PROCORE

- Automate the setup of a Procore project site, in conjunction with M365, and instantly connect Autodesk Build, BIM 360, PlanGrid, SharePoint, Teams, and Box for complete interoperability at the onset of the project.
- Ensure Procore and other connected systems have the same project ID, metadata, and scalable taxonomy to deliver a single source of truth.
- Facilitate document control workflows across Procore and connected systems.
- Eliminate duplicate data entry by synchronizing content across Procore and other connected systems.
- Speed up the process of sending project information via email by reducing time spent searching for files across connected systems.
- Connect Procore and Autodesk RFIs, allowing users to manage them across systems simultaneously within their preferred location.
- Register email and attachments directly to Procore libraries.
- Easily report on project information and gain workflow visibility across systems.

WHO WE SERVE

- We help construction professionals, design firms, and project owners in need of a modern collaborative project information management solution that fuels connectivity to the larger project ecosystem.
- We help construction project owners, general contractors, and others establish a governed system of systems that allows them to distill information across multiple platforms.

"ProjectReady is another step towards connecting siloed workflows between project teams including owners, general contractors, specialty contractors & design teams. This integration will provide an opportunity to improve efficiency & transparency as our industry continues its digital transformation."

Kris Lengieza
Vice President of Global Partnerships & Alliances, **Procore**

ProjectReady's Unified, Modern, Dynamic Interface

See, sync, connect, manage, and act on project information across systems and quickly view and drill into Procore-specific information.

ProjectReady's Outlook Integration

Formally register email and attachments to the project, create tasks, manage workflows, and simply file content to the project's M365 Group Mailbox in Outlook.

ProjectReady's DCNext Content Cart

Quickly find and access project files from connected systems and easily deploy a number of document control workflows.
